

# FEATHER MEAL

## NITROGEN FERTILIZER (13-0-0)

Nature Safe Feather Meal is a by-product of poultry processing industry, making it sustainable and cost effective. This OMRI Certified product is 100% organic matter adding nitrogen to the soil slowly over a period of 3 months. This fertilizer is perfect for staple crops like corn, beans and leaf vegetable that require a consistent supply of nitrogen. While being extremely high in nitrogen the feather meal is a “slow feed” providing an immediate enrichment and continues to feed as the plants metabolize the nitrogen as they grow.

Feather meal works with the life in the soil like no other fertilizer, activating compost decomposition and improving the soil structure by interacting with bacteria and nematodes. This breaks down the nitrogen in the soil where the plants can easily absorb it easily at a constant release rate.

### INSTRUCTIONS:

Spreading out the application period is important with this particular fertilizer; this will ensure that the plant will use the extra nutrients in the fertilizer. Be cautious with over applying, this will cause ‘burning’ and damage your crops.

### HOW TO APPLY:

-Suggested Application Rate for General Vegetable Gardening: 7lbs. per 1000 square feet of growing space; ¼ cup per plant

-Heavy feeding crops such as staple crops: 12lbs. per 1000 square feet of growing space; 1/3 cup per plant
